

## ABOUT THE EXODX TEST

The ExoDx Test is a urine based prostate cancer marker (PCM) that helps the patient decide their individual risk for harboring a clinically significant prostate cancer.

PCMS  
Prostate Cancer Markers

# ExoDx

## HOW IT'S USED

- Whom to biopsy: identify significant prostate cancer.
- Screening and early detection of prostate cancer.

## INDICATIONS FOR USE

- Men age 50+
- Men with a low risk (Gleason 3+3=6) prostate biopsy.
- Men with a previously negative prostate biopsy.

## SCIENCE

- ExoDx analyzes exosomal RNA from your urine sample for three biomarkers known to be expressed in men with high-grade prostate cancer.
  - ERG, PCA3 and SPDEF

## PRESENTATION OF RESULTS

The ExoDx Score is returned as above or below the cutoff of 15.6 for high grade prostate cancer.

- If below 15.6, there is a decreased likelihood of greater than or equal to Gleason 7 prostate cancer on biopsy.
- If above 15.6, there is an increased likelihood of greater than or equal to Gleason 7 prostate cancer on biopsy.
